

Java Basic Practice Questions

Topics: Method Overloading, Constructor, Constructor Overloading & Star Patterns

Level: Basic

1. Method Overloading

1. Create two **add()** methods: one accepting two integers and another accepting three integers. Call both methods.
2. What is method overloading? Write one simple example.

2. Constructor

3. Create a **Student** class with a constructor that prints `Student object created`. Create an object and check the output.

3. Constructor Overloading

4. Create a **Car** class with two constructors: `Car()` and `Car(String brand)`. Create objects using both constructors.

4. Star Patterns

5. Write a Java program to print:

```
*
* *
* * *
* * * *
* * * * *
```

6. Write a Java program to print:

```
* * * * *
* * * *
* * *
* *
*
```

Practice Tip: First write the code yourself, then run it and check the output.
